- 2. Heavy to Very Heavy with Extremely Heavy Rainfall is very likely to occur over West Khasi Hills, South West Khasi Hills, Eastern West Khasi Hills, East Jaintia Hills and West Jaintia Hills Districts at isolated places.**

In view of the prevailing weather conditions, the Meghalaya State Disaster Management Authority (MSDMA) urges all citizens of the state to take necessary precautions and remain vigilant. The current weather patterns may lead to risks such as flooding, landslides, lightning strikes, waterlogging, falling trees, and disruptions to utility services.

Daily commuters and long-distance travelers are advised to plan their journeys carefully and avoid travel during periods of intense rainfall. Outdoor recreational activities should also be avoided during such times.

Residents living in low-lying areas, near hillsides, or in locations with ongoing construction should stay alert for any signs of flooding, flash floods, or landslides.

The public is strongly advised to stay updated with official weather bulletins and follow instructions issued by District Authorities to ensure safety during adverse weather conditions.

District Authorities and DDMA's are closely monitoring the situation, and emergency response systems are on high alert. The MSDMA will continue to provide updates as necessary for public awareness.
